### **ILT Introduces New Lampholders Product Line**

The "H200" Line of Lampholders Added to ILT's Already Extensive Lampholder Product Line

Peabody, MA – International Light Technologies (ILT), a leading designer, manufacturer and distributor of specialty light sources and light measurement and detection systems, is pleased to announce the addition of the ILT H200 series Lampholders.

The new H200 series of lampholders (part numbers H208 thru H294) were added in response to customer requests for more cost-effective lampholders.

Lamp holders are an essential part of a lighting system. Choosing the wrong lampholder can lead to lost power and lamps not working effectively. All lamps are typically listed with a rated voltage and wattage, and it is essential the lampholder used to get the power to the lamp from the power source is a good and effective one. Under-powering or over-powering a lamp can have a large impact on the life of the lamp as well as its spectral output.

The entire Lampholder section of the ILT Web site has also been recently upgraded to include much larger photos of each lamp holder, and includes a new Lamp Base Type Filter so customers can view only those lampholders suited for the lamp base type of the lamp they plan to use.

"Adding the H200 series Lampholders was essential to meeting ALL of our customers' needs", said Jill Fowler, Director of ILT's Systems & Sources products. "We now have a lampholder product line that numbers almost 100 individual lampholders, 30 of which are the new H200 series."

"ILT's decades of experience in providing specialty lamps for numerous applications have given us particularly good insight into the pitfalls of choosing the wrong lampholder", Thom Connolly, ILT's President, said about ILT's new UV LED products. "That's why we're pleased to add a line of cost-effective lampholders that we feel confident can also meet the technical needs of our many specialty lamp customers."
